EDUCATION

İstanbul Sabahattin Zaim University

Bachelor of Arts in Computer Science

istanbul, Turkey

September. 2022 – June 2026

EXPERIENCE

Full Stack Developer

TheDopple (thedopple.com)

March 2026 – Present

California, USA

- Built and maintained production full-stack features across distributed frontend and backend systems, contributing to core product stability and scalability.
- Developed and enhanced key business flows including registry, checkout, and order management, ensuring data consistency and correct business logic execution.
- Implemented pricing and funding logic for registry system, handling accurate calculation and synchronization of totals across cart, checkout, and registry pages.
- Improved UI/UX consistency across critical user flows such as authentication and checkout by aligning components with the internal design system.
- Contributed to backend-driven features including admin workflows, order visibility, and custom item approval processes.
- Integrated and debugged Figma MCP workflow to improve design-to-code synchronization and reduce developer friction in UI implementation.
- Worked in a Git-based development workflow using feature branching, pull requests, code reviews, and staging deployments in a team environment.

Backend Developer

JuniusTech (juniustech.com)

June 2025 – March 2026

Istanbul, Turkey

- Contributed to backend development using Node.js and Express.js in production-level applications.
- Implemented JWT-based authentication and authorization systems for secure user management.
- Designed and managed MongoDB database schemas and performed CRUD operations.
- Integrated Cloudinary for media upload and file management functionalities.
- Collaborated with the development team using Git and GitHub for version control and code reviews.
- Worked on the backend of OLE, a cafe review and rating platform.

PROJECTS

Fashion Finder – Clothing Discovery Platform | *Node.js, Express.js, MongoDB, ScrapingBee*

- Developed a full-stack web application that allows users to discover and compare clothing items from external e-commerce sources.
- Implemented web scraping using ScrapingBee to collect and aggregate product data from multiple online stores.
- Designed backend architecture for product search, filtering, and structured data storage using MongoDB.
- Built a scalable system to normalize scraped product data for consistent display and comparison.
- Focused on improving user experience for fashion discovery through centralized product aggregation.

Email Service System Migration | *Node.js, SendGrid, Jinja2, PostgreSQL*

- Migrated legacy SendGrid email system to a modular email service architecture
- Replaced static templates with dynamic Jinja2-based email rendering system
- Designed provider-agnostic email adapter layer for future extensibility
- Implemented template-based transactional email flows (registration, notifications, sharing)

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL, HTML/CSS

Frameworks: Node.js, Express.js, FastAPI, React, REST APIs, SpringBoot, Django, JWT

Tools: Git, GitHub, Docker, Postman, VS Code, Cloudinary, MongoDB, PostgreSQL, MySQL, Firebase
